TECHNICAL DATA SHEET

Petron Plus™ Synthetic Dual Clutch Transmission Supplement is formulated to help prevent shudder in sophisticated dual-clutch transmissions (DCTs). It provides superior protection and consistently produce fast, smooth shifts. Petron Plus™ Synthetic Dual Clutch Transmission Supplement ensures stability in stop-and-go traffic.

Petron Plus™ Synthetic Dual Clutch Transmission Supplement helps resist the extreme heat in today's high-temperature DCTs to provide complete protection for gears, bearings and other vital parts. Its high film strength and anti-wear/extreme-pressure additives are formulated to protect the metal surfaces of DCTs.

Dual clutch transmission fluid can shear at the molecular level as it flows between gear teeth and bearings. This leads to reduced viscosity and decreased wear protection. Petron Plus™ Synthetic Dual Clutch Transmission Supplement helps resist shear and provides extra protection even in the extreme stress of high-horsepower, high-torque applications.

APPLICATIONS:
